# Accelerate Computer Vision with Intel® Distribution of OpenVINO™ toolkit

## What it is

A toolkit to accelerate development of **high performance computer vision** and **deep learning into vision applications** from device to cloud. It enables deep learning on hardware accelerators and easy **heterogeneous** execution across multiple types of Intel® platforms. The toolkit includes:

- Intel® Deep Learning Deployment Toolkit
- Optimized functions for OpenCV\*, media encode/decode, and more
- 20+ pre-trained models, code samples, supports 100+ public and custom models

## Why important

Demand is growing for intelligent vision solutions.

- **Deep learning revenue** is estimated to grow from \$655M in 2016 to **\$35B by 2025<sup>1</sup>**.

This requires **developer tools** to integrate computer vision, deep learning, and analytics processing capabilities into applications, so they can help **turn data into insights that fuel artificial intelligence**.

**Users & Usages:** **Software developers, data scientists** working on vision solutions for surveillance, robotics, healthcare, AI, office automation, transportation, & more. Some non-vision use cases such as speech also apply.

# Benefits of Intel® Distribution of OpenVINO™ toolkit

Maximize the Power of Intel® Processors  
CPU, GPU/Intel® Processor Graphics, FPGA, VPU

 <b>ACCELERATE PERFORMANCE</b>	 <b>INTEGRATE DEEP LEARNING</b>
Access Intel computer vision accelerators. Speed code performance. Supports heterogeneous execution.	Unleash CNN-based deep learning inference using a common API, 20+ pre-trained models, & computer vision algorithms. Validated on more than 100 public/custom models.
 <b>SPEED DEVELOPMENT</b>	 <b>INNOVATE &amp; CUSTOMIZE</b>
Reduce time using a library of optimized OpenCV* & OpenVX* functions, & 15+ samples. Develop once, deploy for current & future Intel-based devices.	Use OpenCL™ kernels/tools to add your own unique code. Customize layers without the overhead of frameworks.

# What's Inside Intel® Distribution of OpenVINO™ toolkit

**OS Support** CentOS\* 7.4 (64 bit) Ubuntu\* 16.04.3 LTS (64 bit) Microsoft Windows\* 10 (64 bit) Yocto Project\* version Poky Jethro v2.0.3 (64 bit)

Intel® Architecture-Based  
Platforms Support

An open source version is available at [01.org/openvintoolkit](https://01.org/openvintoolkit) (some deep learning functions support Intel CPU/GPU only).

# Intel® Deep Learning Deployment Toolkit

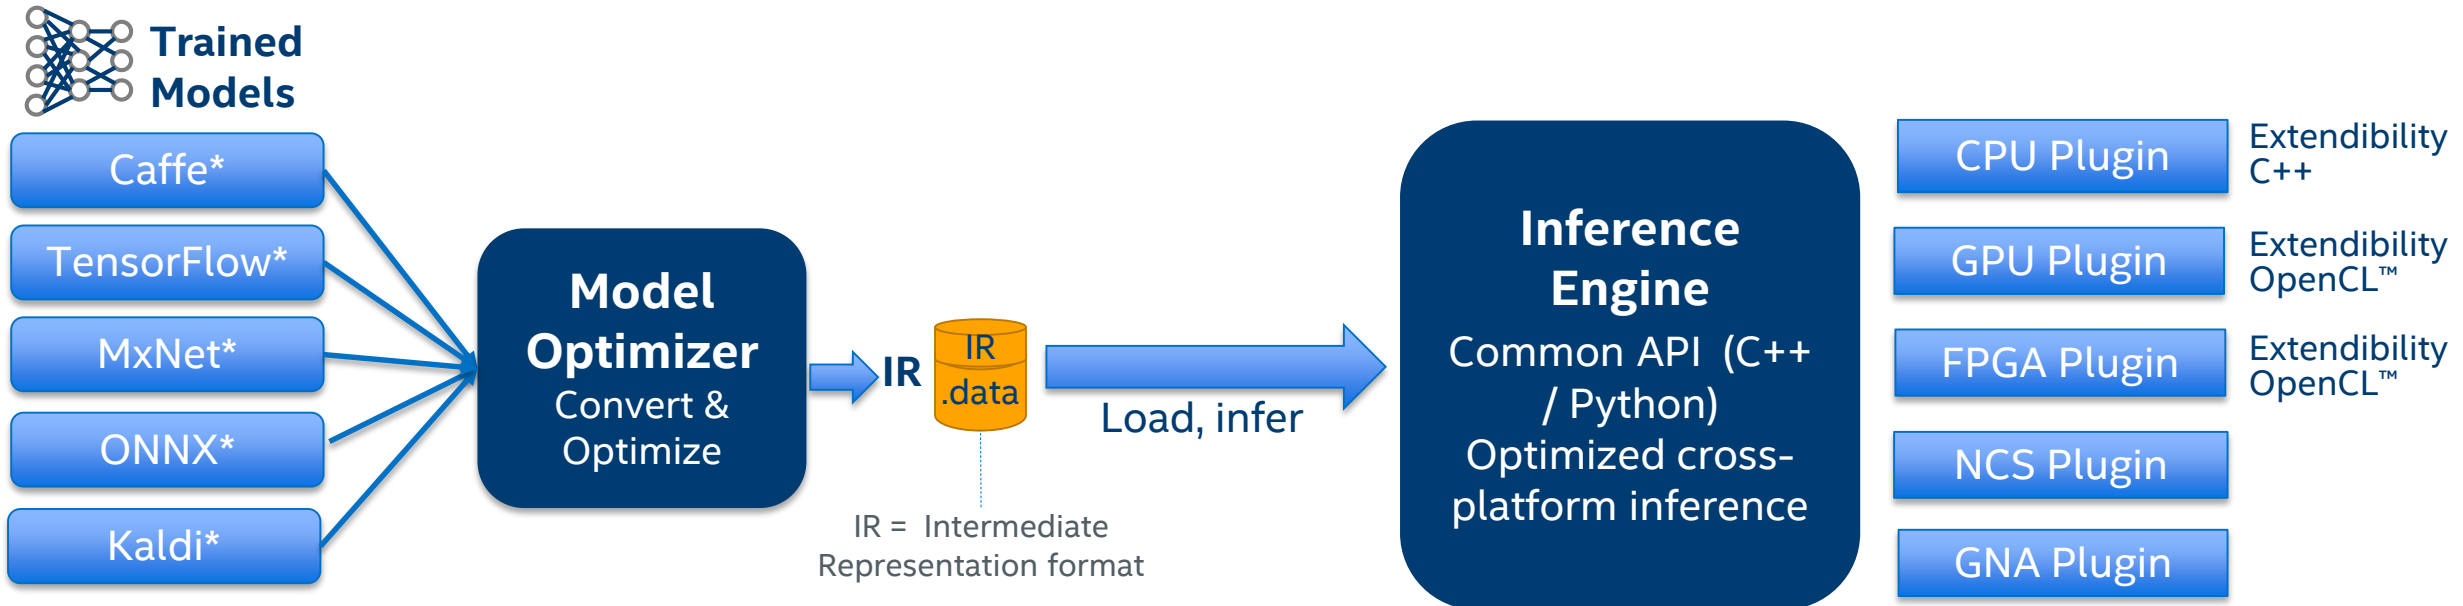

## For Deep Learning Inference

### Model Optimizer

- **What it is:** A python based tool to import trained models and convert them to Intermediate representation.
- **Why important:** Optimizes for performance/space with conservative topology transformations; biggest boost is from conversion to data types matching hardware.

### Inference Engine

- **What it is:** High-level inference API
- **Why important:** Interface is implemented as dynamically loaded plugins for each hardware type. Delivers best performance for each type without requiring users to implement and maintain multiple code pathways.

GPU = Intel CPU with integrated graphics processing unit/Intel® Processor Graphics

# OpenVINO™ Toolkit

## Open source version

- Provides flexibility and availability to the developer community to extend OpenVINO™ toolkit for custom needs
- Components that are open sourced
  - Deep Learning Deployment Toolkit with CPU, GPU & Heterogeneous plugins [github.com/opencv/dldt](https://github.com/opencv/dldt)
  - Open Model Zoo - includes pre-trained models, model downloader, demos and samples - [github.com/opencv/open\\_model\\_zoo](https://github.com/opencv/open_model_zoo)
- See [FAQ](#) for key differences between OpenVINO™ Toolkit (open source) and Intel® Distribution of OpenVINO™ Toolkit (Intel version)

**Q&A**

# Legal Disclaimer & Optimization Notice

The benchmark results reported in this deck may need to be revised as additional testing is conducted. The results depend on the specific platform configurations and workloads utilized in the testing, and may not be applicable to any particular user's components, computer system or workloads. The results are not necessarily representative of other benchmarks and other benchmark results may show greater or lesser impact from mitigations.

Software and workloads used in performance tests may have been optimized for performance only on Intel microprocessors. Performance tests, such as SYSmark and MobileMark, are measured using specific computer systems, components, software, operations and functions. Any change to any of those factors may cause the results to vary. You should consult other information and performance tests to assist you in fully evaluating your contemplated purchases, including the performance of that product when combined with other products. For more complete information visit [www.intel.com/benchmarks](http://www.intel.com/benchmarks).

## Optimization Notice

Intel's compilers may or may not optimize to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include SSE2, SSE3, and SSSE3 instruction sets and other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel. Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors. Certain optimizations not specific to Intel microarchitecture are reserved for Intel microprocessors. Please refer to the applicable product User and Reference Guides for more information regarding the specific instruction sets covered by this notice.
